

Network Cloud OVS-DPDK Blueprint and Feature Project

Andrew Wilkinson

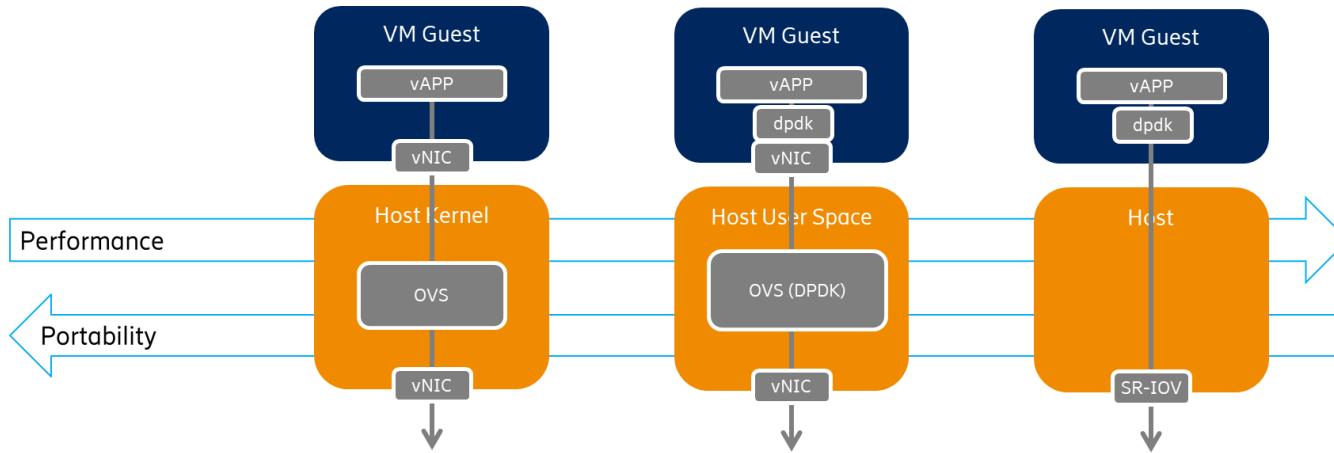

Network Cloud Unicycle Blueprint with OVS-DPDK

- › New SPECIES to add OVS-DPDK support into existing Network Cloud Unicycle Blueprint Family
- › Joint community effort by Ericsson and AT&T
- › Integration with feature project to add OVS-DPDK support to Airship distribution
- › Based on Dell PowerEdge R740XD Servers to deploy kubernetes (undercloud) and containerized Openstack platform (overcloud) using Airship
- › VNF Orchestration using ONAP

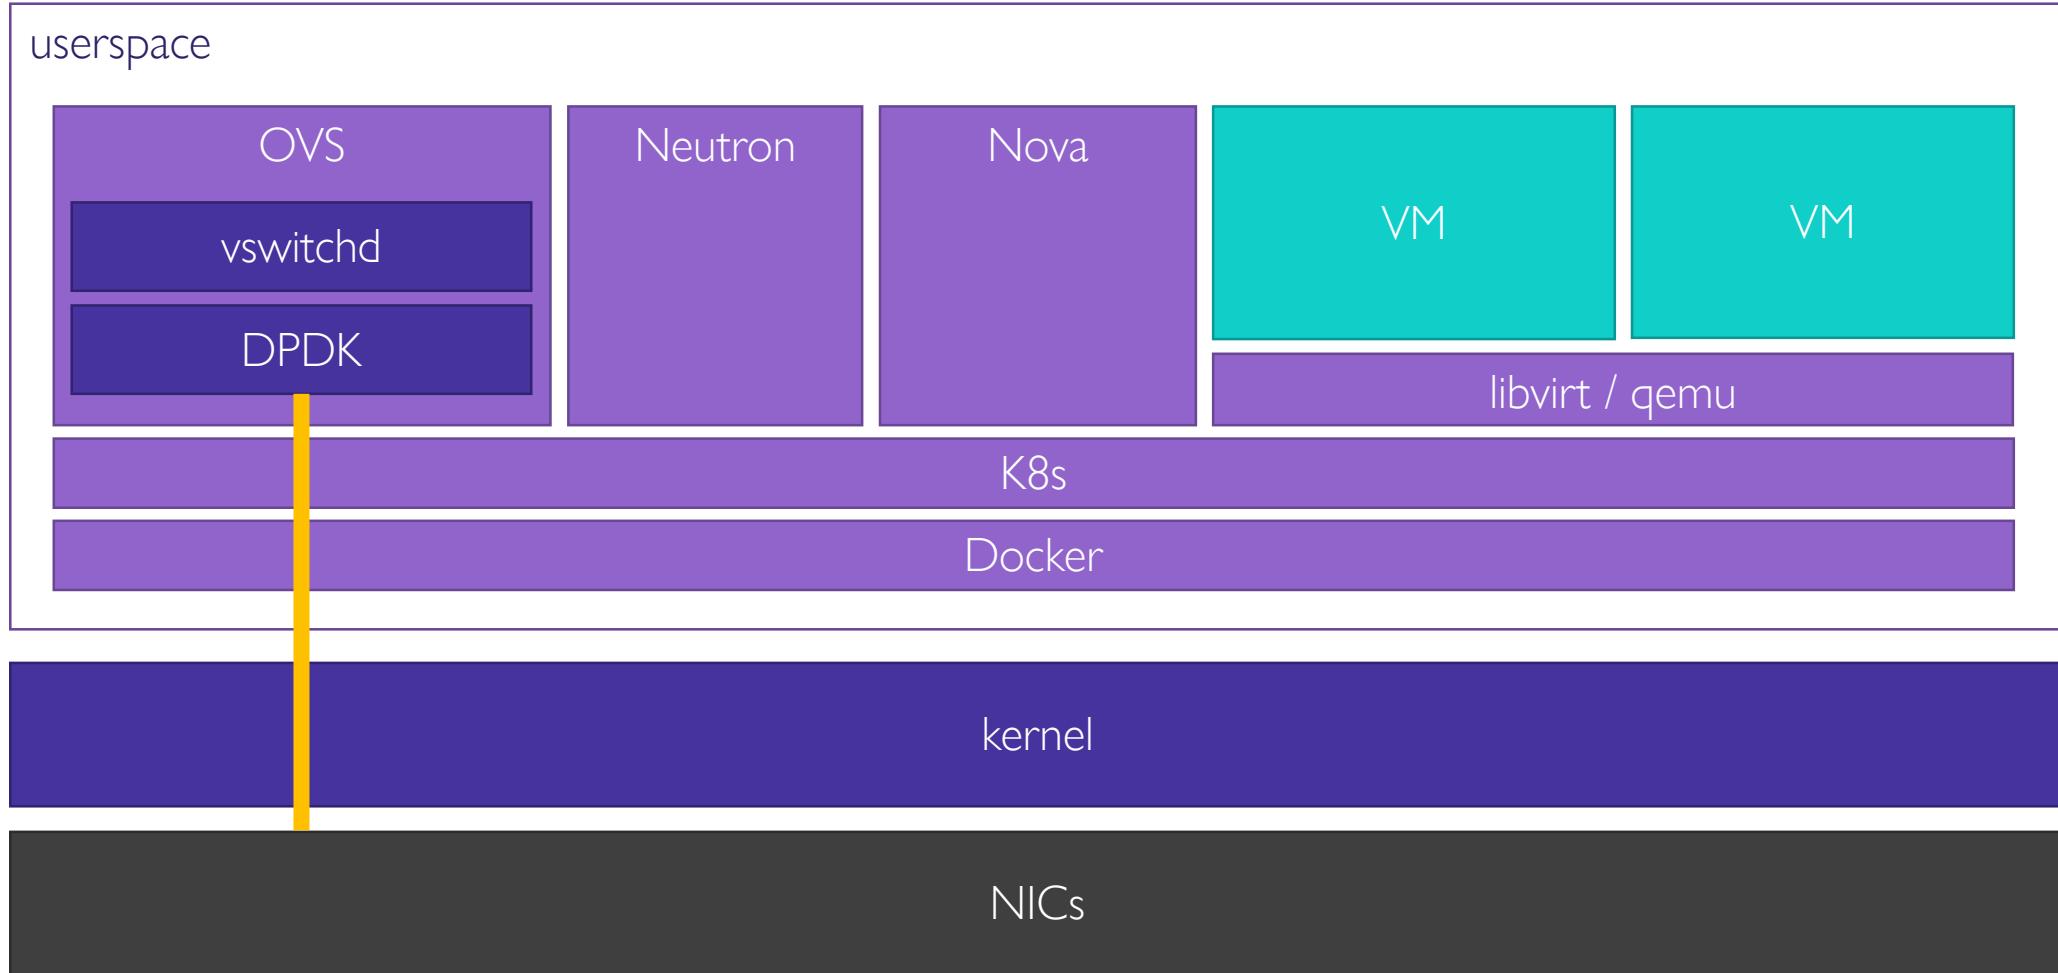

Packet Processing Options

Interface from application	To VNIC via sockets (Linux kernel)	Direct to VNIC using DPDK	To physical NIC via virtual function (e.g., SR-IOV)
Comments	<ul style="list-style-type: none">+ High portability- Poor performance	<ul style="list-style-type: none">+ Good portability+ Good performance for most use cases+ Functionality in open source, outside the VM	<ul style="list-style-type: none">+ Good performance for most use cases- HW dependency and vendor lock-in- Functionality pushed to VM

OVS-DPDK Software Stack

OVS-DPDK Core Components

openvswitch-vswitchd

openvswitch-db

neutron-ovs-agent

“other Neutron components”

- › OpenVswitch
 - › Functionality split in two pods
- › openvswitch-db
 - › OVSDB server and database
- › openvswitch-vswitchd
 - › DPDK-enabled userspace switch
- › Neutron
 - › Functionality spread across 10+ pods
- › neutron-ovs-agent
 - › Performs configuration of OVS
 - › DPDK specific operations
 - › Loading of kernel modules
 - › Binding of NICs to DPDK
 - › Creation of DPDK-enabled bridges
 - › Adding of DPDK ports (NICs) to bridges
 - › Configuration of IPs for overlay tunneling

DPDK Configuration for OpenStack-Helm

openvswitch-vswitchd

openvswitch-db

neutron-ovs-agent

“other Neutron components”

› New configuration parameters

Hugepage configuration

```
resources:  
  enabled: false  
  ovs:  
    vswitchd:  
      requests:  
        memory: "128Mi"  
        cpu: "100m"  
    limits:  
      memory: "1024Mi"  
      cpu: "2000m"  
      hugepages-1Gi: "1Gi"  
      # hugepages-2Mi: "512Mi"
```

DPDK configuration

```
dpdk:  
  enabled: false  
  socket_memory: 1024  
  hugepages_mountpath: /dev/hugepages  
  mem_channels: 4  
  lcore_mask: 0x1  
  pmd_cpu_mask: 0x4
```

› New configuration parameters

OVS agent configuration

```
ovs_dpdk:  
  enabled: false  
  driver: uio_pci_generic  
  nics:  
    - name: dpdk0  
      pci_id: '0000:05:00.0'  
      bridge: br-phy  
      migrate_ip: true  
      n_rxq: 2  
      pmd_rxq_affinity: "0:3,1:27"  
      ofport_request: 1  
  bridges:  
    - name: br-phy
```

Integration in Network Cloud Blueprint

- › Extension of the Network Cloud blueprint
 - › Additional DPDK-specific configuration
 - › New set of templates to render DPDK configuration for Airship
- › Open and ongoing items
 - › Support for advanced features
 - › NIC bonding, jumbo frames, queue sizes
 - › Troubleshooting and configuration guide
