Multi-server Integrated Cloud Native NFV/App stack
ICN Blueprint Family
Goal: Is to have end-to-end Cloud native platform

R4 Overview and R5 updates

Contacts: Srinivasa.r.addepalli@intel.com; kuralamudhan.ramakrishnan@intel.com
What is ICN?

- A reference architecture/integration initiative targeting edge computing use cases
- Approved (incubation phase) as a ‘blueprint’ family within the Akraino project (LF)
- ICN Family has three blueprints
  - Multi-server Integrated Cloud Native NFV/App stack
  - Private LTE/5G
  - Multi-Tenant Secure Cloud Native Platform
- Lead ICN use case is SD-EWAN, Distributed Cloud Manager, Distributed Analytics as a Service; IOT framework - EdgeXFoundry, Video CDN & Streaming to follow
- ICN Family has 16 Partners:
  - Verizon, VMWare, Dell, Orange, Airbus, T-Mobile US, Juniper Networks, Cloudlyte – Tata Communications, MobileEdgeX, Aarna Networks...
- Intel-optimized ingredients include: OpenNESS, EdgeX, SRIOV, QAT, CSI/Optane, K8s HPA, etc.
- Highly dependent on Intel’s upstream enabling
Traditional Cloud Native frameworks
For Enterprise applications

Traditionally
- Number of K8s clusters are small
- K8s Cluster installation/upgrades are mostly done independently in each location.
- Deployment of applications on K8s clusters is also done independently.
- K8s clusters are used for normal applications
- Network and security functions are deployed outside of K8s clusters as physical appliances or virtual appliances

Today K8s Clusters are not meant for Network functions and Telcos. Need for Telco grade platform.
*Let us see the needs*
Need: High performance applications
Low latency, Deterministic performance & high throughput

High performance applications requirement
- Dedicate cores
- Core affinity
- L3 Cache allocation
- NUMA aware placement
- Dedicating Memory bandwidth

Intel ICN solution
- OpenNESS platform micro-services
  - CMK for core affinity/dedication.
  - Topology manager for NUMA aware placement
  - KPI aware scheduling
  - RDT configuration
Need: Cloud Native network functions
Resource constrained Edges, Data plane NF (such as UPF, firewall, RAN) support
Separate Management Interface

Network function requirements
- **SRIOV-NIC support**
- **Multiple CNIs**
- **Multiple virtual networks**
- **Provider network support**
- **Service function chaining**
- **Some cases, attaching GPU and FPGA based accelerators.**
- **Platform feature exposure**

Intel ICN solution:
- **OpenNESS Network Services**
  - SRIOV-NIC device plugin/CNI
  - FPGA Device service.
  - Multus for Multiple CNI support
  - NFD
- **OVN-for-K8s-NFV Network Controller:**
  - For Multiple virtual networks, Provider networks & Service function chaining
How does NFV based deployment with Cloud Native network functions look like? (Taking SDWAN with security NFs as an example)

Implementation Consideration

No changes to NFs

No changes to Apps

Configuration via operators

OVN based SRIOV Overlays

Smart NIC friendly & AF_XDP for packet processing NFs

OVN4NFV: https://gerrit.opnfv.org/gerrit/admin/repos/ovn4nfv-k8s-plugin
Need: Support for Large number of Edges
Simplify cluster life cycle management

Large number of Edge Cluster
Install, upgrade/patch and terminate are complex operations

Intel ICN solution
- Infrastructure orchestration (infra-local-controller) based on ClusterAPI, Metal3 and Ironic.

ICN Infra local controllers: https://gerrit.akraino.org/r/admin/repos/icn
Need: Geo-Distributed Application (Such as 5GRAN, 5GC) Life Cycle management
For geo-distributed applications across multiple K8s clusters

Distributed Application deployment and visibility
- Simplify
- Geo distribution

Intel ICN solution:
- EMCO
  - Onboarding of composite applications
  - Deployment intent
  - Configure ISTIO and security of edges automatically
  - Comprehensive visibility across clusters
Need: Secure Overlay
For connecting edge locations security for inter application traffic

Unique Edge challenges (No public IP, Less bandwidth links, Prone to DDoS attacks) and the need for overlay

Intel ICN solution:
- SD-EWAN
  - OpenWrt based
  - CNF
  - Cloud native configuration
  - Traffic Hub for traffic sanitization
  - Controller Hub to create security and WAN policies dynamically
- FW+NAT+DPI+IPSEC+SLB
- ISTIO/Envoy based Application overlay
  - Automation of ISTIO (Ingress, egress & SC) across edges for microservice connectivity
How the Secure Overlay For connecting edge locations security for inter application traffic works?

- **SD-EWAN**
  - Open WRT based SE-DWAN CNFS
  - Cloud Native based SD-EWAN controller and IPSec controller
  - Zero touch automation
  - Solution to all Edge Challenges identified
  - Centralization controller for configuration
  - Traffic Hub for sanitization

**Advantages**
- No changes to application Micro services and configuring Edges
- Supporting both green field and brownfield requirements
- Work with third party SD-WAN VNFs (future roadmap)

**Refer**

How the Secure Overlay For connecting edge locations security for inter application traffic works?

SD-EWAN
- Open WRT based SE-DWAN CNFS
- Cloud Native based SD-EWAN controller and IPSec controller
- Zero touch automation
- Solution to all Edge Challenges identified
- Centralization controller for configuration
- Traffic Hub for sanitization

Advantages
- No changes to application Micro services and configuring Edges
- Supporting both green field and brownfield requirements
- Work with third party SD-WAN VNFs (future roadmap)

Need: Analytics
For collecting statistics and making them available for analysis & closed loops

- Local collection agents
- Local inferencing and closed loop
- Centralized metrics collection
- Training
- Model Reps
- Policy based Analytics
- Rule Synchronizer

Intel ICN solution:
- Distributed AI Analytics
  - CollectD, Prometheus
  - Grafana
  - M3DB for central collection
  - Spark & TF for training
  - Kafka for distribution
  - Minio for storage

- Flexibility to deploy various pieces at various locations.

ICN Recipe

- **ICN is an excellent starting point for Cloud native Telco grade PaaS**
- **Far better than a generic baseline**
- **But with modular extensions and services that can be built upon in Telco, Enterprise and IoT uses cases**
- **ICN is complete End2End platform – All SW and HW necessary for Edge Service Providers and Telcos that require deployment of CNFs, VNFs, CNAs and all working together.**

Upcoming features in ICN R5 Release

• SDEWAN and IPSec controller, SDEWAN HUB
  • More Flexibility and more controllers for MWAN3, Firewall, SNAT/DNAT and IPSec
• Optimization with Intel IA accelerators (QAT, AES-NI)
• OVN4NFV as Network plugin in Kubespray
• Multi Network Service Function Chaining (SFC) using OVN4NFV in ICN
• Introducing Kubevirt in the ICN stack
• More device plugin integration to meet high performance workloads based on GPU, FGPA
Call for Action

• Try it yourself !!

• What to be a ICN contributor – Please sign up here with LF ID !!
  • [https://wiki.akraino.org/x/BAi3](https://wiki.akraino.org/x/BAi3)

• Missing Features or bug ? – create an issue here !!
  • [https://jira.akraino.org/projects/ICN/issues](https://jira.akraino.org/projects/ICN/issues)

• Talk to us regarding your Edge use cases in Akraino ICN slack
  • Invite yourself - [https://akraino-icn-admin.herokuapp.com/](https://akraino-icn-admin.herokuapp.com/)
