Software Defined Smart Cameras

Smart Camera Deployments are Already Everywhere

Smart Camera Market Bound for Large Growth Ahead

A Trend Pushing For a Large Increase of Functionalities

- ✓ Record video

- ✓ Record video
- ✓ Automated track/monitoring
- ✓ Person/object/activity Identification
- ✓ Cloud connectivity
- ✓ Many other services

Smart Camera Transformation Underpinned by 3 Key Trends

Shift to Edge Compute

AI-enabled
intelligent cameras

Increased Security Focus

Resilient and secure
deployments

Cloud Native

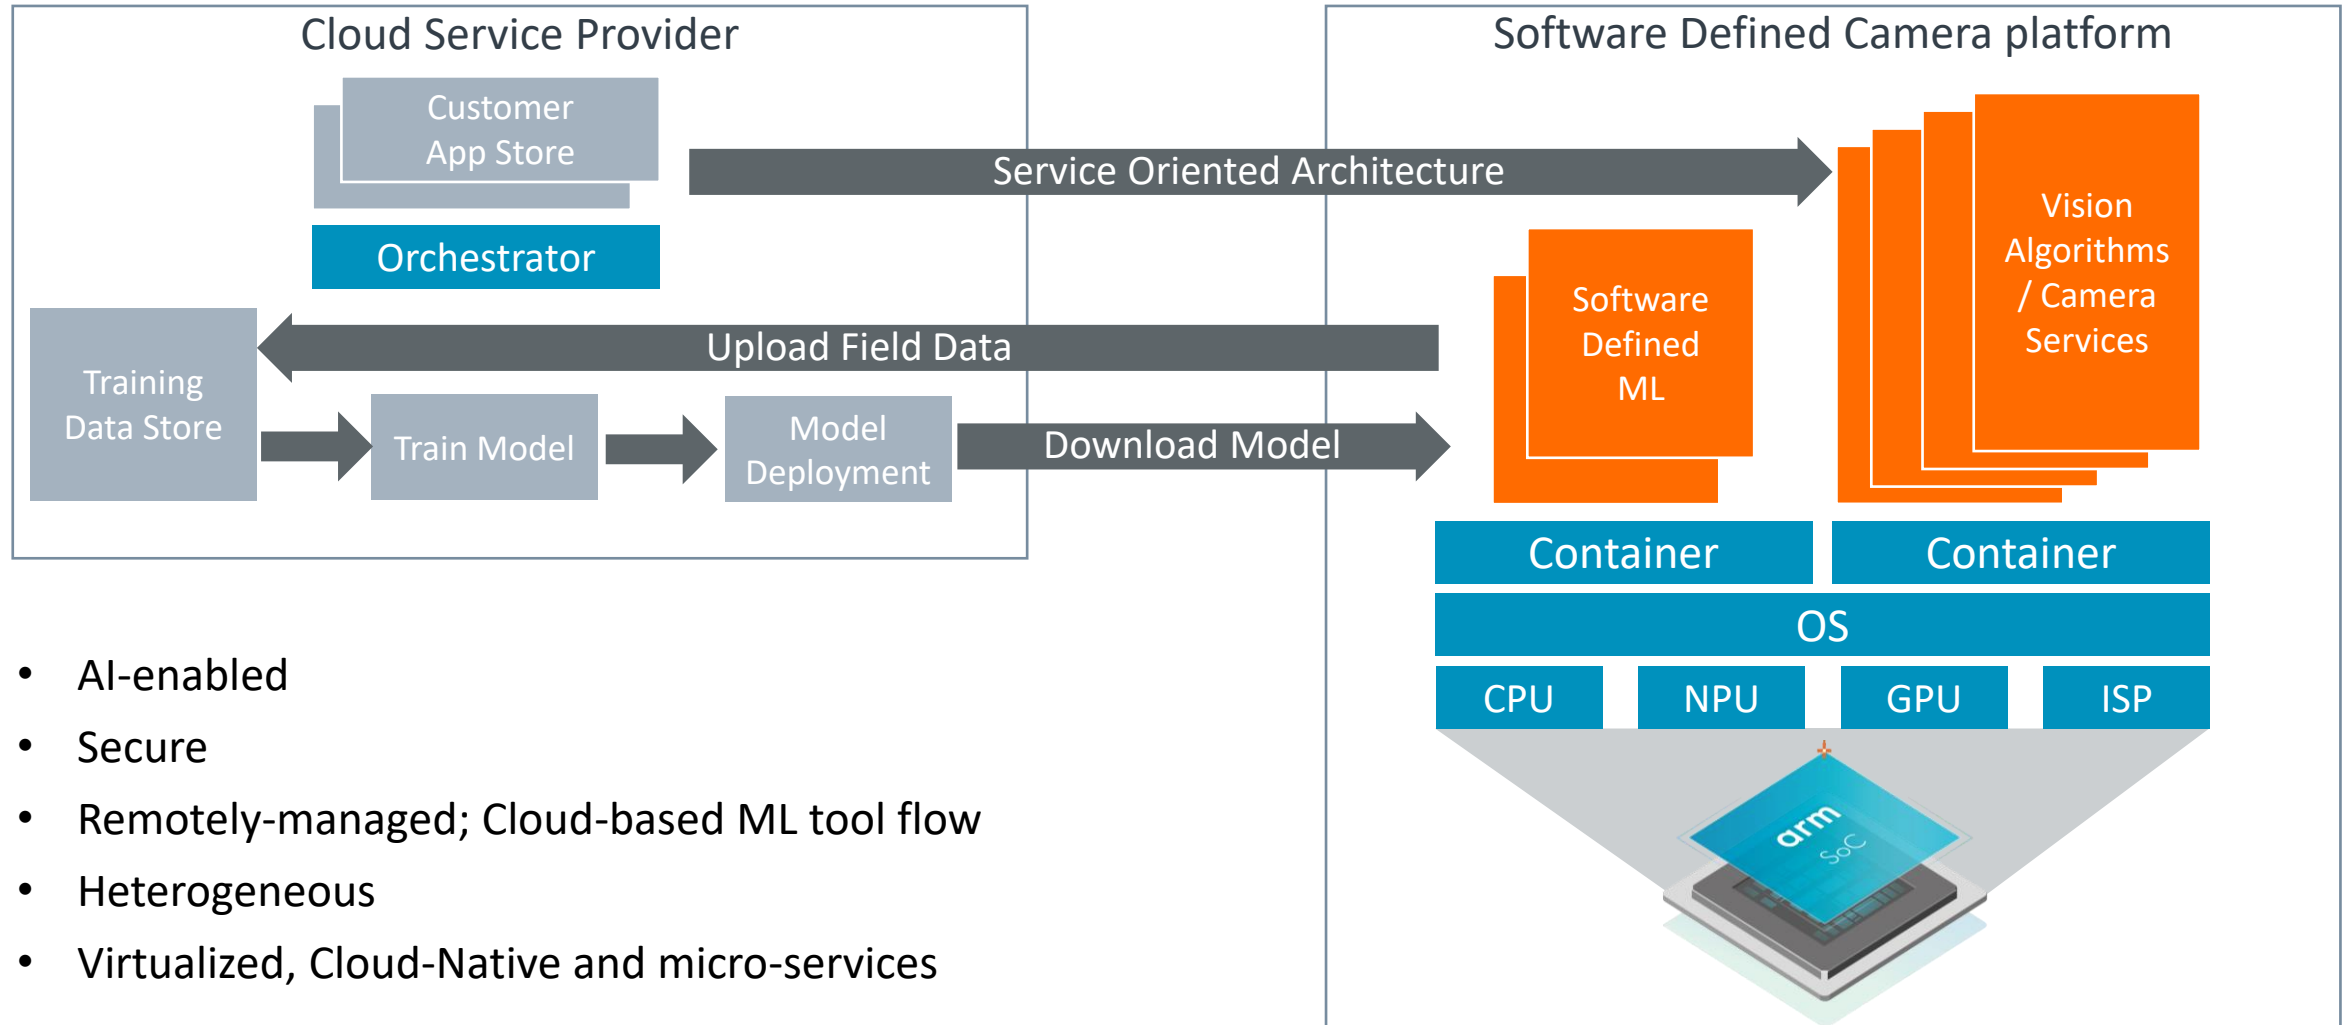

Run cloud-native applications
and deploy services over time

Smart Cameras Are Becoming “Software Defined”

- ❑ Functions enabled by software are abstracted from hardware
- ❑ Functions enabled using cloud-native Service-Oriented Architecture (SOA) software development model:
 - ✓ Functions delivered as services are self-contained units of software
 - ✓ System for publishing available services to the camera
 - ✓ Centralized management of these services

Edge Computing is Driving Architecture Evolution of Camera

- AI-enabled
- Secure
- Remotely-managed; Cloud-based ML tool flow
- Heterogeneous
- Virtualized, Cloud-Native and micro-services

New Applications Are Enabled by ML and AI

Location and Tracking

- Identify people and other objects
- Track direction and motion to predict location
- Enable hotspot detection

Smart and Secure

- Grant access onto property
- Privacy preserving with secure local inference
- Third party model/IP protection

Automatic Boundaries

- Create boundary conditions quickly with Image Segmentation

Increasing Intelligence

- Estimate actions with pose estimation and understanding
- Ability to interact verbally with security system

Why Security Matters for Smart Cameras

Camera

Data Transmission

Cloud

Hardware attacks

Software attacks

Theft of footage

Denial of Service

Modification of footage

Theft of ML models

Unauthorized user access

Theft of data

Cloud-Native and Over-The-Air Update to Deploy Services

Cloud computing platform

SystemReady: Foundation to Enable Cloud-Native Software

- Implementation standards around the Arm architecture: HW & FW
- Standard, “off the shelf” community or commercial OS, containers and Hypervisors simply ‘work’ on Arm MPUs
- Wider choice of SoCs vendors for multiple camera platforms with frictionless SW portability and CD/CI development principles
- Opens access to the cloud native SW ecosystem

arm SystemReady ✓

Software Defined Cameras Accelerate Deployments

- Camera deployments are growing rapidly, with the market set to reach \$44B by 2025
- Smart cameras are becoming edge computing devices, with ML workloads redefining their functionality
- Software Defined Cameras abstract hardware from software, enabling future-proofed device deployments with OTA updatable services
