Akraiino Annual Report 2022

Prepared by Jeff Brower, Signologic, Inc.
Dallas, Texas
Akraino Annual Report - Contents

- Executive Summary
- Activities
- Modifications to Key Documents
- Subcommittee Updates
  - Security
  - API
  - Upstream / Downstream
  - Technical Discussion
- Regional Akraino Organizations
- More Info / Q&A
- Supplemental - edge computing blueprint summary
Executive Summary

• Akraino continues to generate edge computing blueprints and use case examples. TSC meetings are twice-a-week, holding a steady average of around 10-12 participants

• Trend in use cases has shifted in 2021 and 2022 from telco-oriented to a wider range of cloud interfacing and smart edge

• Examples of ongoing effort include cloud – edge interface and architecture, connected/intelligent vehicles, and robotics

• Progress in establishing regional Akraino organizations is a notable accomplishment in 2022

• Promotion and marketing to a wider technical audience continues to be Akraino’s main challenge
Akraino Overview

• For anyone who may need an overview …

• Akraino is an LF Edge open source community focusing on edge computing
  – covers a broad range of use cases and technologies
  – publishes blueprints – a high level combination of software, architecture, and data flow diagrams, working code, and documentation
  – collaborates with SDOs such as ETSI MEC
  – applies a multidisciplinary approach with key subcommittees
  – key strengths - wide range of industry participants, technology diversity
Activities

• Nov 2021 get-together and tech presentations
  – Akraino held its first face-to-face meeting since Mar 3 2020! It worked out well and was exciting for people to see each other again
  – 1 day face-to-face in Palo Alto (at Hanahaus)
  – attendance around 12, with additional remote participants

• Spring Technical Summit, Mar 2022
  – 3 days in hybrid format
  – 1 day face-to-face in Palo Alto (at Hanahaus)
  – attendance around 20, with additional remote participants

• Fall Summit, Technical and Organizational, Sep 2022
  – 3 days in hybrid format, both technical and organizational topics
  – 1 day face-to-face at Google Mountain View location
  – 2nd day live at locations in Germany, China, and S Korea, 3rd day live at Arm (Santa Clara)
  – attendance day 1 around 30, with additional remote participants. Excellent!

• Upcoming
  – ETSI MEC Hackathon, Edge Computing World conference, 10-12 Oct, organized by ETSI and LF Edge/Akraino
Modifications to Key Documents

- **Modifications to governing documentation**
  - required TSC voting approval
  - required brief Q&A with LF legal counsel

- **Technical Community Document wiki page**
  - TSC responsibilities, section 4.5.1, Identifying and Recruiting Akraino Localized Organizations
  - cross-reference to regional communities wiki page
  - summary – new regional organizations have a step-by-step list for marketing and compliance, the TSC actively reviews and then votes

- **Regional Communities wiki page**
  - clarify policy and operational procedure
  - cross-reference to Tech Community Document wiki page

- **Technical Community subcommittee wiki page**
  - modifications to blueprint review procedure
Security Subcommittee

- **New chair**
  - Danill Egranov @ Arm has taken over from Randy Stricklin @ AT&T

- Defining security requirements for blueprint execution environments and software components used by blueprint owners (maturity and incubation releases)
  1. Minimum OS requirements (OS vendor, release version).
  2. Minimum OS configuration including security and runtime services
  3. Minimum CVE level permitted for maturity and incubation releases

- Reviewing and updating security requirements every 6 months (aligned with Akraino releases)

- Reviewing blueprint security logs generated by BluVal ([https://wiki.akraino.org/display/AK/Bluval+Akraino+blueprint+validation+framework](https://wiki.akraino.org/display/AK/Bluval+Akraino+blueprint+validation+framework))

- Working with blueprint owners on security issues found with Lynis, Vuls and kube-hunter (BluVal test package), and helping to resolve them

- Day-to-day monitoring of Lynis, Vuls, and kube-hunter security issues and databases

- Defining platform security requirements (work in progress)

- **Chair Danill Egranov**
• **Improvements to API Info gathering spreadsheet and procedures**
  – additional subcategories
  – required brief Q&A with LF legal counsel

• **Discussion about 2\textsuperscript{nd} sources**
  – Ongoing, this started up after the Google IoT Core deprecation, which was an attention getter
  – the current thinking is to ask blueprint teams to list and/or comment on possible 2\textsuperscript{nd} sources for upstream dependencies

• **Subcommittee help with other activities**
  – the subcommittee took the lead in ironing out issues with regional Akraino organization application and approval process
  – the subcommittee helped organize the Nov 2021 face-to-face and Spring Technical Summit

• **Chair Jeff Brower**
Upstream / Downstream Subcommittee

• Release 6/7 review going well. Most BPs have no upstream changes. Any BPs with upstream changes will need to inform us in advance
  • https://wiki.akraino.org/display/AK/Release+6+Upstream+Review+Status

• Worked with API subcommittee in review of three (32) regional labs (so far in 2022). Africa lab and China north lab are fully approved. China south lab in TSC process.
  • https://wiki.akraino.org/display/AK/Akraino+Regional+Communities

• Chair Jim Xu
Technical Discussion Subcommittee

Primary role is to review blueprints in incubation stage

Gain an understanding of the blueprint

- Overall goals, objectives, and long-term direction in edge computing

Look for areas of synergy with

- Other blueprints, upstream communities, downstream communities, and Akraino regional organizations

Map the blueprint into areas being promoted by Akraino and LF Edge

- Such as: edge cloud, data privacy, security, 5G/6G, Metaverse, Blockchain, MEC, high performance computing (HPC), robotics, etc

- Chair Doug Eng
Technical Discussion Subcommittee, cont.

3 incubation reviews approved in 2022

- **pipelineDP Blueprint**
  - Conversation led by Wenhui Zhang

- **CFN (Computing Force Network) Ubiquitous Computing Force Blueprint**
  - Conversation led by Hanyu Ding and Yanjun Chen

- **Edge Service Enabling Platform Blueprint**
  - Conversation led by Colin Peters
  - Special Thank You to Jeff Brower for chairing this meeting!!!
• Information to be added …

• Chair Ike Alisson
Regional Akraino Organizations

• Two new organizations approved
  – Africa – The Edge Hub, aka The Cortex Hub
    - East London, S Africa
    - theedgethub.org
    - thecoretexhub.africa
    - an ICT incubator
  – China north – Green Computing Consortium
    - Beijing
    - opengcc.org
    - open and innovative ecosystem in China for green computing in cloud data center infrastructure

• Pending
  – China south
More Info / Q&A

• Ask me for any follow-up info
  – specific blueprints
  – subcommittee chair and co-chair contact info
  – blueprint project team leader (PTL) contact info

• Top level Wiki page
  – https://wiki.akraino.org

• Q&A
  – fire away!
Supplemental

Following slides are supplemental material
Cloud Native

• **NFV stack**
  – SDWAN, customer edge, edge clouds – deploy VNFs and CNFs as micro-services
  – key organization: Intel

• **Multi-tenant security**
  – deploy secure and trusted workloads and bare-metal containers
  – key organization: Intel
Cloud / Edge Border

• **Public cloud / edge interface**
  – set of open APIs for edge applications (primarily telco) to expose towards public cloud providers
  – key organization: Equinix

• **Network cloud**
  – network cloud architecture allowing single SDN controller for containers, VMs, and bare metal servers. Incorporates Tungsten Fabric
  – key organization: Juniper Networks
Integrated Edge Cloud

• **Edge stack**
  – Integrated Edge Cloud (IEC) family of blueprints
  – deployment of edge VR/AR streaming
  – key organization: Tencent

• **Smart NIC**
  – accelerate performance of VPCs and 5G UPFs
  – key organizations: ByteDance, SocNoc, Arm

• **Edge Arm Servers**
  – run Android cloud native apps at the edge
  – key organizations: ByteDance, Arm
• **Lightweight 5G**
  – enable enterprise applications at the telco edge
  – key organization: Huawei

• **Private 5G**
  – end-to-end LTE/5G connectivity using CBRS band
  – key organizations: Cohere Technologies, Verizon

• **5G MEC slicing**
  – high performance cloud gaming, HD video, and live broadcasting edge applications
  – key organizations: Tencent, China Mobile
• **Federated machine learning**
  – machine learning across mobile and IoT devices
  – key organizations: WeBank, inwinStack

• **School monitoring**
  – school safety, security, and surveillance
  – key organizations: Baidu, Arm, Intel, Penn State Univ

• **Intelligent vehicle cooperation**
  – AVs – current focus is on autonomous taxis
  – key organizations: Baidu, Intel, Arm
• **Robotics**
  – current focus is industrial and enterprise robots (e.g. food preparation and production)
  – areas of emphasis:
    – technical challenges: tactile/touch, speech recognition, real-time operation
    – robot safety (cloud independence as needed)
    – privacy of user data
  – key organizations: Fujitsu, Signalogic

• **Cloud gateway for IoT apps**
  – enable industrial IoT use cases
  – key organization: Huawei

• **SD-WAN**
  – networking for edge and micro CPE use cases
  – key organization: Huawei
Connected Edge Nodes

• **Cities**
  – smart cities – AVs, utilities management, smart buildings, safety and emergency services
  – key organizations: Arm, Microsoft, Nexcom

• **Vehicles**
  – connected vehicles – vehicle communication of route, action, safety information. Key org: Tencent
  – MEC-based topology prediction – AV path prediction, communication. Key org: Jeju Nat Univ
Areas of Common Work

• **Whitepapers**
  – collaborative publications between different blueprint teams
  – Akraino Edge Stack APIs, Jun 2020
  – Cloud interfacing at the telco edge, Jul 2020
  – Sharpening the Edge: Overview of the LF Edge Taxonomy and Framework (LF Edge, Aug 2020)

• **Security**
  – security subcommittee oversees cert process for blueprints prior to release
  – automated checks include Lynis scan, vulnerabilities, Kubernetes ("kube hunter")

• **Documentation**
  – documentation subcommittee
Areas of Common Work, cont.

• **APIs**
  – API subcommittee oversees gathering of organization-wide API info
  – standardized API form
  – API map (https://apiportal.akraino.org/apimap.html)

• **TSC planning, review, and approval process**
  – technical steering committee
  – review and voting approval for all BPs
  – discussion and planning of organization wide issues
