

Ericsson Validation Labs

For the R1 release Ericsson validated three Network Cloud blueprints on Dell 740XD servers:

- [Ericsson Unicycle OVS-DPDK Validation HW, Networking and IP plan](#)
- [Ericsson Unicycle SR-IOV Validation HW, Networking and IP plan](#)
- [Ericsson Rover Validation HW, Networking and IP plan](#)

Note: In R1 the OVS-DPDK datapath is only supported and validated without LAG and with a VXLAN overlay network.
