

# R2 Validated Blueprints

In Akraino R2 the Network Cloud Family includes the following self-certified Blueprints

- [R2 Rover Blueprint](#)
- [R2 Unicycle with OVS-DPDK Blueprint](#)
- [R2 Unicycle with SR-IOV Blueprint](#)

These three blueprints were originally released as self-certified in R1 and likewise in R2 also support the SR-IOV or OVS-DPDK high performance data planes.

The main changes in R2 are an upgrade to Airship 1.3 and addition of VLAN neutron provider network data path transport for the OVS-DPDK blueprint described in the [R2 Release Notes](#) in further detail.
