SEBA for TA minutes 2020.01.06

Attendees

- Julie Lorentzen
- Ciprian Barbu
- Tom Moore
- Tina Tsou
- Zack Williams
- David Plunkett

Agenda

- Status check on Release 2 blueprint (target mid-Jan for public release)
- Discuss near-term plans

Minutes

- Near term work will likely focus on ARM-based implementation; likely will still need to use custom charts (due to upstream dependencies/timeline)
- In ONF/SEBA/VOLTHA, would be good to have a job to have periodic system tests run against ARM-based system as well (voltha sanity test, ...); Zack provided link (https://jenkins.opencord.org/view/VOLTHA-2.X-Tests/job/periodic-voltha-sanity-test/), Ciprian will see if tests can be replicated manually for ARM
  - Currently, issue with testing every ONF VOLTHA patchset against ARM system is related to ARM hardware availability for testing (to replicate and resolve problem)
- Zack: recommend getting kind-voltha to run on ARM; try to get periodic sanity tests running on ARM - Ciprian agreed to look at this
