We have started to kick the tires on getting an Architecture White Paper with a companion demo @ ONES (<https://events.linuxfoundation.org/open-networking-edge-summit-north-america/>)

We hope to get an Arch white paper which strengthens our community and highlights the synergies across projects in the LF edge community.

As a first step we hope to gather insights on projects so we can elevate the key features in our white paper. The last date to enter data is 14th Feb, Valentines day :)

The idea is to get key attributes like Arch Diagram, underlying stack, Key features, startup scripts, API design and data model. It would be great if you could enlighten us on how does Akraino integrate with other projects in LF Edge? Where do you see overlap?

We also have few demos in works addressing IOT vertical using EVE, HomeEdge PAAS hosting Fledge, Edgex stacks. It would be great to bring out synergies among other projects across other verticals too.
