SEBA for TA minutes 2020.01.27

Attendees

- Julie Lorentzen
- Zack Williams
- Tina Tsou
- Ciprian Barbu

Agenda

- Discussion/status check - voltha sanity tests for ARM-based system, packer job to build AMI images
- Discuss/draft milestones for SEBA for TA on ARM
  - ARM-based implementation with custom charts

Minutes

- Status:
  - Zack working on getting ONF ONOS Jenkins up to same versions (jjb) that LF uses; some issues/patches opened in LF gerrit - this is prerequisite to the packer work
    - Once the patches are through LF gerrit, will work on packer jobs
  - Ciprian will look into packer updates required for multi-arch - also looking at packer for voltctl
  - after packer updates done, work on docker build/push job - may test on a repo that is not heavily utilized
- Note: SEBA 2.0-alpha release is evolution of CORD 6.0/7.0
