

REC Project Minutes 2020.05.07

Attendees

- [Paul Carver](#)
- [Alex Antone](#)
- [Tina Tsou](#)
- [Darrin Vallis](#)
- [Gao Chen](#)
- [Ciprian Barbu](#)
- [Colin Hutchinson](#)

Agenda

- BluVal testing status

Minutes

- Discussion of DANM networking and connectivity between RIC and e/gNodeBs
- Alex asked about running O-CU over TA. Paul said that current discussions that he has heard have concerned the O-DU. Most likely we would wait until after the O-RAN-SC Bronze release (June 6th) to integrate whatever is release with Akraino.
- Ciprian reported that they are working on setting up a Helm repo to store SEBA charts for their work on ARM64. Also working on creating "release" charts for SEBA for ARM64, basically cord-platform, seba and att-workflow charts. On another track, the other colleagues are working on testing SEBA on Ampere POD1, there are several issues to overcome, due to a newer Kubernetes version and different CNI used (Flannel vs Calico).
