

# SEBA 1.0.0 for ARM Installation instructions

Note: this page is old and no longer applicable. It describes how to install SEBA 1.0.0, over CORD Platform 6.1.0, for ARM64 servers.

## Install CORD Platform & SEBA

First, clone the AArch64-specific helm charts for cord-platform, seba, att-workflow and bbsim using:

```
$ git clone http://github.com/iecedge/seba_charts cord
```

Then proceed to [install components as a whole](#) as described in the [SEBA Installation Guide](#), skipping the `helm repo add` and `helm update` commands.

## Test/operate a SEBA installation
