

REC Project Minutes 2020.06.04

Attendees

- [Paul Carver](#)
- [Alex Antone](#)
- [Darrin Vallis](#)
- [Tina Tsou](#)

Agenda

- CI Build Failure Resolved. New build 313 available. This build failed AT&T CD testing but the failure reason is unclear, just a timeout. We need to investigate

Minutes

- Darrin reported on Ampere's test installs of REC on ARM and running into incompatibilities between the 10G switch they're using and the 25G NICs in the servers
- Alex reported that they are working on running BlueVal tests on ARM64 and will be creating an Akraino Validation Lab documentation for ARM64 under [REC Test Document](#)
- Latest successful ARM build was 134 but builds are now failing because the base image (upstream CentOS image `BASE_IMAGE_URL=https://cloud.centos.org/altarch/7/images/aarch64/CentOS-7-aarch64-GenericCloud-1708.qcow2.xz` that Akraino CI pulls from) is gone (HTTP 404 error from cloud.centos.org). It looks like the image has simply been moved to <https://cloud.centos.org/altarch/7/images/CentOS-7-aarch64-GenericCloud-1708.qcow2.xz> so Alex will submit a change to update the URL. <https://gerrit.akraino.org/r/c/ta/manifest/+3547>
