

Radio Edge Cloud Validation Lab (ARM64)

For the ARM64 architecture the [Ampere Pod 1](#) of the [Shared Community Lab](#) at UNH is used to do CD and validation.

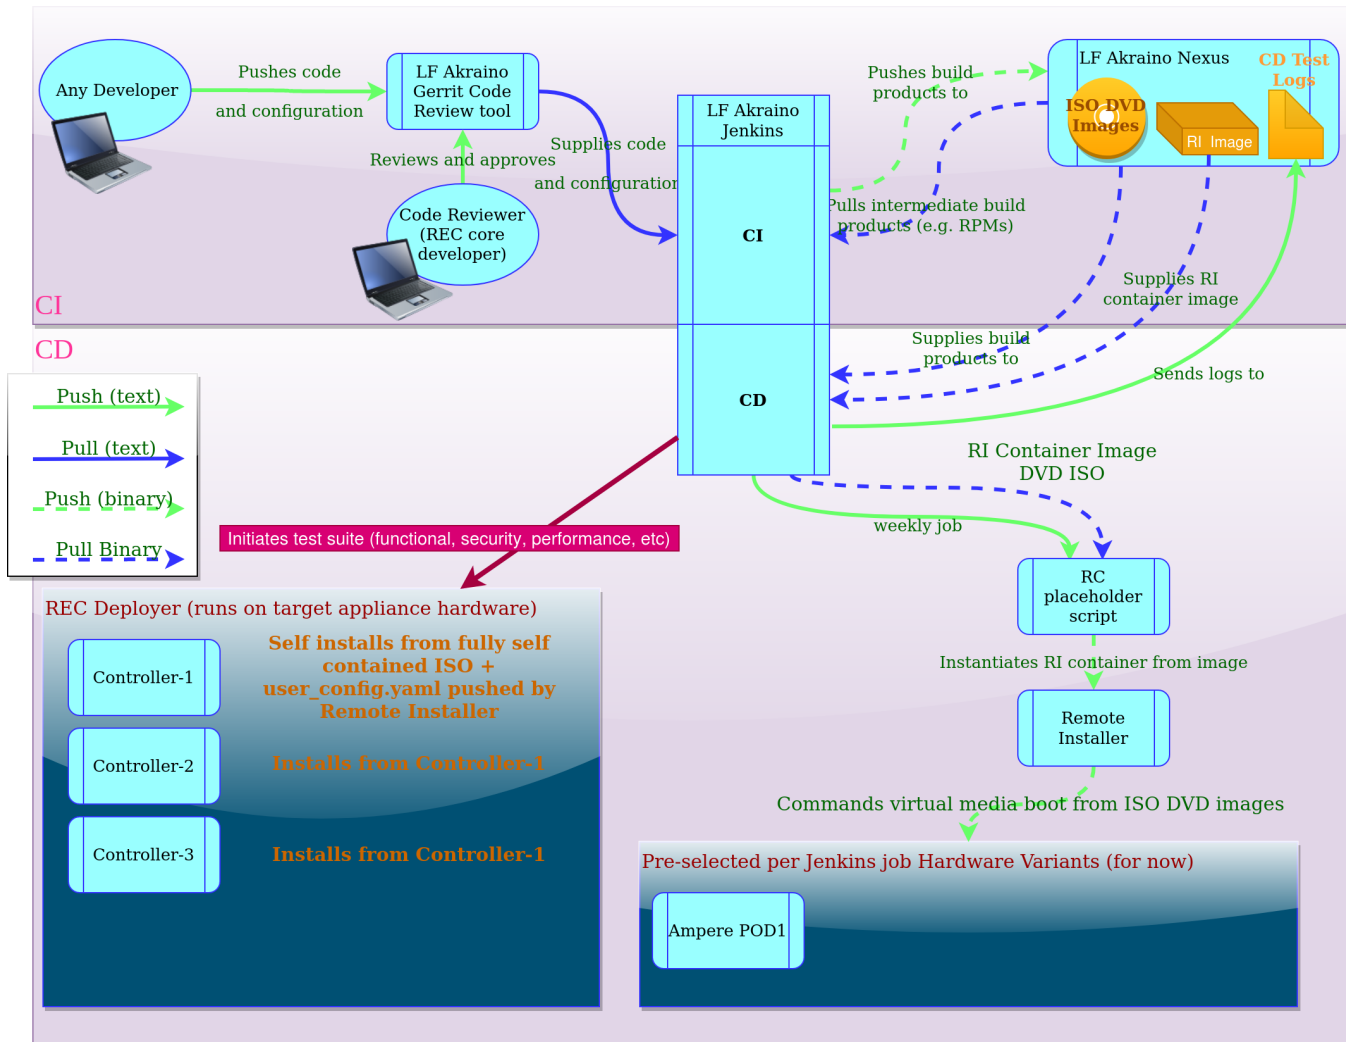

Logs from the CD installation of Telco Appliance (the parent blueprint for REC) are available at https://logs.akraino.org/production/vex-yul-akraino-jenkins-prod-1/rec-aarch64_baremetal-install-rec-weekly-master/

CD is done weekly on Saturday and Sunday at 1:00 AM UTC via the [rec-aarch64_baremetal-weekly-master](#) parent job, which triggers the [rec-aarch64_baremetal-install-rec-weekly-master](#) installation job and in the future the validation and RIC install jobs.

The latest aarch64 ISO image found at <https://nexus.akraino.org/content/repositories/images-snapshots/TA/images/arm64/latest/> is used and installed through the [remote-installer](#) bare metal deployer.

Currently the only ISO is the Telco Appliance ISO. The REC Continuous Deployment Jenkins installs just TA on bare metal as RIC is not yet ported to aarch64. The future plan is to incorporate the RIC at build time.

Continuous Integration Continuous Deployment Flow

Akraino TA for ARM64 Continuous Deployment Hardware

For the hardware used please refer to the [Ampere Pod 1](#) of the [Shared Community Lab](#) at UNH.

Radio Edge Cloud Network Cabling and VLANs

Server Name	IPMI Address	IPMI VLAN ID	Public Network Address	Public Network VLAN ID	Switch Port(s)
ampere1	10.11.5.11	3005	10.11.6.11	3006	Cisco TOR: Left 25Gbe Port 41, Right 25Gbe Port 42
ampere2	10.11.5.12	3005	10.11.6.12	3006	Cisco TOR: Left 25Gbe Port 43, Right 25Gbe Port 44
ampere3	10.11.5.13	3005	10.11.6.13	3006	Cisco TOR: Left 25Gbe Port 45, Right 25Gbe Port 46
ampere-jumphost	10.11.5.14	3005	10.11.6.14	3006	Cisco TOR: Left 25Gbe Port 33
