

Private LTE/5G ICN Blueprint

This project is building an opensource stack to enable CSP/enterprises leverage the solution for deploying Private LTE/5G using CBRS band

Project Technical Lead: Prem Sankar Gopannan, Elected 12 May 2020

Use Case Attributes	Description	Informational
Type	New	
Blueprint Family	Integrated Cloud Native NFV (ICN)	
Use Case	End to end connectivity using Private LTE/5G over the CBRS band	
Blueprint proposed Name	Private LTE/5G ICN blueprint	
Initial POD Cost (capex)	Same as ICN — 50K minimum	
Scale & Type	Same as ICN — Minimum of 4 Xeon Servers + 1 Xeon server as genesis	
Applications	RAN+Core (initially LTE, eventually 5G), and reuse of existing ICN applications: ML/DL Analytics, EdgeXFoundry and 360 degree Video streaming	
Power Restrictions	TBD	
Orchestration	Same as ICN — Infrastructure Orchestration • Bare Metal Provisioning : ironic with Metal3 controlled by Cluster API • Kubernetes provisioning : KuD. • Centralized controller: With Cluster-API • Docker for containers and Virtlet for VMs Service Orchestration : ONAP with AF integration MEC framework: OpenNESS Site orchestrator : Kubernetes upstream Traffic Orchestration within a cluster: ISTIO Traffic orchestration with external entities : ISTIO-ingress and ISTIO-egress with MCDeployment Knative for function orchestration Additional platform component: Open source UPF	
SDN	Same as ICN — OVN, SRIOV, Flannel; additionally Tungsten Fabric	
Workload Type	Containers and functions	
Additional Details	Our roadmap will be: • Private LTE • Private 5G Option 5 (i.e. LTE radio + 5GC) • Private 5G SA (i.e. 5G radio + 5GC) Use cases: • Manufacturing • Farming • Healthcare • V2X • Others
