

ELIOT R5 - IoT Gateway Installation Guide

Introduction

The guide covers the installation details which are related to ELIOT IoT Gateway Blueprint.

This guide covers detailed information of the various types of deployments, detailed steps and what are the various components it will install. In addition, the guide provides information on hardware requirements, prerequisite software and minimum hardware requirements. On successful deployment, Center and Edge Nodes will be installed. The number of nodes in Center cluster and Edge node in the cluster is configurable.

The CENTER Node is a K8s Cluster and EDGE Node is a K8s Cluster worker node.

How to use this document

The document includes details of prerequisites /pre-installation, installation and uninstalls steps.

The prerequisites and pre-installation software and hardware should be ready before executing the installation steps.

In BP first release Two types of installation mechanisms are provided, as below

1. Ansible-Playbook single command
2. Command Line Interface (CLI)

Deployment Architecture

The Deployment Architecture consists of the following nodes

- One-Click Deployment Node
- ELIOT Master Node
- IoTGateway Node

Note: For Development environment two nodes is sufficient, where one node plays a dual role of One-Click Deployment Node and Master Node with other as IoTGateway Node.

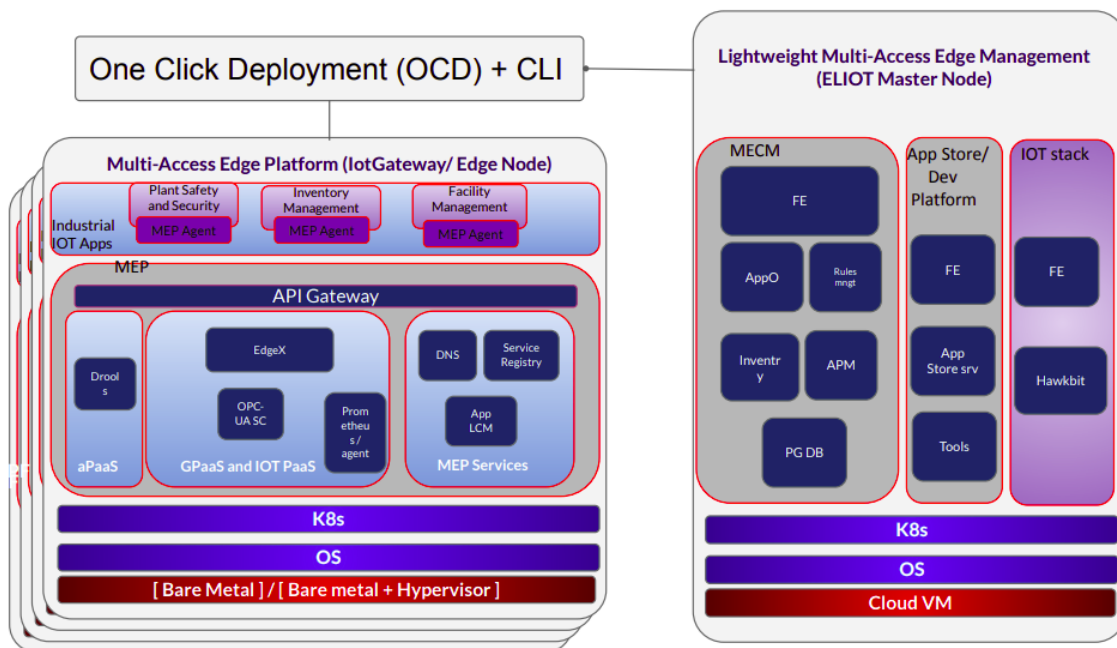

Figure: ELIOT Deployment Architecture

Note: ELIOT IoTGateway Blueprint Deployment has been tested on Cloud VM and is not tested on Bare-Metal Environment. Though, theoretically deployment should work in bare metal, provided hardware and software prerequisites are met. Kindly refer [R5 - Test Documentation of Edge Lightweight IoTGateway \(ELIOT\)](#) to get details on the tested deployment.

Pre-Installation Requirements

Hardware Requirements

The number of Hardware requirements depends mainly on the Use Case Scenario and the enterprise scale. A use case can have one Deployment node, ELIOT Master or controller node with one or multiple IoTGateway nodes.

The minimum number of nodes required for a complete ELIOT Topology is 2. (Bare-Metal or Virtual Machines)

- 1) Deployment Node
- 2) ELIOT Master
- 3) ELIOT IoTGateway node

Note: The Hardware details provided are of Virtual Machine configurations.

Minimum Hardware Requirements

ELIOT Master Node	
HW Aspect	Requirements
# of Node(s)	A virtual machine hosted in any Cloud Provider having internet connectivity.
# of CPU	8
Architecture	x86_AMD64 or ARM64.
RAM	8 GB
Disk	120 GB ~ 512GB
Networks	1

IoTGateway Node(s)	
HW Aspect	Requirements
# of Node(s)	1 MEC Host
# of CPU	4
Architecture	x86_AMD64 or ARM64.
RAM	4 GB
Disk	20 GB ~ 256 GB
Network	1

Note: The above specifications are given considering the ELIOT CI / CD environment. User can try lower configuration considering lightweight components being used.

Recommended Hardware Requirements

ELIOT Master Node	
HW Aspect	Requirements
# of Node(s)	A virtual machine hosted in any Cloud Provider having internet connectivity.
# of CPU	8
Architecture	x86_AMD64 or ARM64.
RAM	8 GB
Disk	120 GB ~ 512GB
Networks	1

IOTGateway Node(s)	
HW Aspect	Requirements
# of Node(s)	1 MEC Host
# of CPU	4
Architecture	x86_AMD64 or ARM64.
RAM	4 GB
Disk	20 GB ~ 256 GB
Network	1

Software Prerequisites

- Virtual Machines preinstalled with Ubuntu 18.04 for MECM Node.
- Virtual Machines preinstalled with Ubuntu 18.04 for MEC Host Nodes
- root user created in the Deployment Node, MEC Node and MEC Host Node.
- SSH Server running in all the Nodes.
- Ansible > 2.10.7 installed in One Click Deployment Node (Jump Host)
- git installed in Jump Host.

Database Prerequisites

Schema scripts

N/A

Other Installation Requirements

Jump Host Requirements

Network Requirements

- Internet connectivity in OCD Host, ELIOT Master and IOTGateway Nodes.
- The ELIOT Master Node and EDGE/IotGateway Node should be able to ping each other.

Bare Metal Node Requirements

N/A

Execution Requirements (Bare Metal Only)

N/A

Installation High-Level Overview

The blueprint provides one click deployment and command-line interface for installing the ELIOT blueprint components.

Bare Metal Deployment Guide

Install Bare Metal Jump Host

Note: ELIOT Blueprint Deployment has been tested on Huawei Cloud Virtual Machines and is not tested on Bare-Metal Environment.

Though theoretically deployment should run successfully in bare metal too provided hardware and software prerequisites are met.

Creating a Node Inventory File

N/A

Creating the Settings Files

N/A

Running

N/A

Virtual Deployment Guide

For Virtual Deployment minimum 2 Virtual machines, following are the virtual machines(OCD and Master on same node) and their usage

No	Usage
1	One Click Deployment Node
2	ELIOT Master Node
3	IoTGateway Node

All the nodes should have internet connectivity , network interface and network connectivity between the VM's.

In this release to install the ELIOT environment.

i) ELIOT Deployment using Ansible-Playbook single command

Standard Deployment Overview

Jump Host Software Installations:

Login to the Jump Host and perform the below steps:

1. Install Ansible > 2.10.7
2. Install git
3. Install python3 and pip3

Jump Host Pre-Configurations for MECM Components Installation

Login to the Jump Host and perform the below configuration steps (Steps : as below-

1. Generate public key : #ssh-keygen -t rsa

2. Setup password-less login from ocd to center and ocd to edge.

```
sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<node_ip>
```

3. Review and Change Parameters

For EdgeGallery MUNO Mode

```
eliot/blueprints/iotgateway/playbooks/muno-config/controller/hosts-muno-controller
```

```
eliot/blueprints/iotgateway/playbooks/muno-config/controller/var.yml
```

```
eliot/blueprints/iotgateway/playbooks/muno-config/edge/hosts-muno-controller
```

```
eliot/blueprints/iotgateway/playbooks/muno-config/edge/var.yml
```

For EdgeGallery AIO Mode

```
eliot/blueprints/iotgateway/playbooks/hosts-aio
```

For ELIOT stack:

```
eliot/blueprints/iotgateway/playbooks/eliot-inventory.ini
```

Installing Mode : ELIOT using Ansible-Playbooks

1. git clone the eliot repo, to download the software to install the ELIOT Environment.

```
root@akraino-mec-0001:~# git clone "https://gerrit.akraino.org/r/eliot"
```

2. go to the below directory

```
root@akraino-mec-0001:~# cd eliot/blueprints/iotgateway/playbooks
```

3. Modify the Configuration File : eliot-inventory.ini with the details of Master and Edge/lotGateway Nodes.

```
root@akraino-mec-0002:~# vi eliot-inventory.ini
```

4. Modify other configuration files

Edit the configuration file so that the IP addresses of the OCD, ELIOT Master Node, and lotGateway Node are <ocp_ip>, <master_ip>, and <edge_ip> respectively.

An example of the description of the configuration file when the admin password of HARBOR is <password> is shown below.

```
$ eliot/blueprints/iotgateway/playbooks/muno-config/controller/hosts-muno-controller
[master]
<master_ip>
```

```
$ eliot/blueprints/iotgateway/playbooks/muno-config/controller/var.yml
```

```
HARBOR_ADMIN_PASSWORD: <password>
```

```
# Could be true or false
# true: Deploy k8s NFS Server to keep the persistence of all pods' data
# false: No need to keep the persistence of all pods' data
```

```
# ENABLE_PERSISTENCE: true
ENABLE_PERSISTENCE: false
```

```
# ip for portals, will be set to private IP of master node default or
# reset it to be the public IP of master node here
# PORTAL_IP: xxx.xxx.xxx.xxx
PORTAL_IP: <master_ip>
```

```
$ eliot/blueprints/iotgateway/playbooks/muno-config/edge/hosts-muno-edge
[master]
<edge_ip>
```

```
$ eliot/blueprints/iotgateway/playbooks/muno-config/edge/var.yml
```

```
HARBOR_ADMIN_PASSWORD: <password>
```

```
# Could be true or false
# true: Deploy k8s NFS Server to keep the persistence of all pods' data
# false: No need to keep the persistence of all pods' data
ENABLE_PERSISTENCE: false
```

```
# ip for portals, will be set to private IP of master node default or
# reset it to be the public IP of master node here
# PORTAL_IP: xxx.xxx.xxx.xxx
```

```
# NIC name of master node
# If master node is with single NIC, not need to set it here and will get
# the default NIC name during the run time
# If master node is with multiple NICs, should set it here to be
# 2 different NICs
# EG_NODE_EDGE_MP1: eth0
# EG_NODE_EDGE_MM5: eth0
```

```
OCD_IP: <ocp_ip>
```

5. Send the git clone file from OCD to ELIOT Master Node and lotGateway Node.

```
$ scp -r ./eliot <node_ip>:~
```

For Edge Gallery installation:

Select one of Multi Node Inventory Mode (MUNO-Mode) or All in one mode (AIO mode) and install it.

MUNO-Mode:

Execute the below command:

```
cd eliot/blueprints/iotgateway/playbooks
```

```
ansible-playbook -i muno-config/controller/hosts-muno-controller eliot-eg-muno-controller.yml --extra-vars "operation=install" -e "ansible_user=root"
```

```
ansible-playbook -i muno-config/edge/hosts-muno-edge eliot-eg-muno-edge.yml --extra-vars "operation=install" -e "ansible_user=root"
```

For AIO mode:

Execute the below command

```
cd ealt-edge/ocd/infra/playbooks
```

```
root@akraino-mec-0001:~#ansible-playbook eliot-eg-aio-latest.yml -i hosts-aio --extra-vars "operation=install" -e ansible_user=root"
```

FOR ELIOT Stack:

Execute the below command

Setup environment -

```
root@akraino-mec-0001:~# ansible-playbook eliot-all.yml -i eliot-inventory.ini --extra-vars "operation=install"
```

Once the execution is completed in console will see prompt "ELIOTEdge Environment Installed , Components Install ELIOT Master and EDGE Nodes Successfully"

Verifying the Setup

Verifying ELIOT IoTGateway Deployment

Currently the verification is manually done.

1. Login to the Master Node and check whether K8S cluster is installed.
2. Check the below mentioned components and services are running as Pods / Services in Kubernetes cluster
 - a. Edge Gallery
 - b. grafana
 - c. rabbitmq
 - d. cadvisor
 - e. edgex
 - f. Hawkbit
 - g. opc-ua
3. Login to Edge Host and verify the worker node setup

Components and Services running in ELIOT Master Node

Components and Services running ELIOT IoTGateway/ Edge Node

Deploy Application in ELIOT

1. Login to MECM Portal <https://ip:30093>
 - 1.1 click on **Systems ->App LCM ->New Registration**

Name: Applcm(any general name)

IP: applcm"public ip"

Port: 30204

App LCM Registration

*

Name

*

2. Login to Developer Portal <https://ip:30092>

2.1. Add sandbox env to deploy application before publish

Click System -> Host Management -> Add Host

The screenshot shows a 'Modify' form for a host configuration. The form has a blue header bar with the title 'Modify' and a close button. The form fields are as follows:

- Name:** Host-test
- System:** ☒ k8s, ☐ OpenShift
- IP:** 110.13.89.71
- Port:** 31252
- Protocol:** https
- Architecture:** x86
- Status:** NORMAL
- Port Range:** 30000 - 32000
- Address:** Bangalore
- Other:** DC_ID=F5_MManager_VPC;az_dominova;map_certificate=YH0GFYwU1d@P%q@5%4C016;122479a_3
- UploadConfig File:** (button)

The browser's address bar shows 'EdgeGallery Developer - Google Chrome'.

Name: general name

System: k8s

Lcmip: sandbox ip(for testing purpose can provide edge ip, if no sandbox env)

mechost: sandbox ip(for testing purpose can provide edge ip, if no sandbox env)

Port: 31252

Protocol: https

Architecture: x86

Status: Normal

Port Range: leave as it is

Address: Bangalore

UploadConfig File: upload sandboxenvkubecfg file

2.2 Click on **Workspace** -> **Create Project** -> **Application Integration** -> **Start**

- Provide **App Name, Version, Provider, Workload Type, Architecture, Industry, Type**.
- Upload **Icon**, provide **Description**. And click on **confirm**.

Add application integration project

* App Name

cherry

* Version

v1.0

* Provider

Huawei

* Workload Type

Container

VM

* Architecture

* Description

cherry description

18/1024

Confirm

2.3. Now click on **Deployment Test**.

- Upload Docker images directly from portal by clicking on **Upload App Image**
Or, directly push Docker images to Harbor repo (takes lesser time, preferred)
- Click **next**, upload deployment yaml file now.
- After config upload, click **next** and click **start deployment**
- After Deployment is success, click on Release Recourses

Note:

- While Deployment test if any error happens, open ATP portal (<https://ip:30094>) in another tab of browser, sing in, come back to developer portal and re run deployment test
- gitee.com/edgegallery/applications repo provides, A lot of applications with their logo, deployment yaml & user guides

2.4. Now click on **Application Release**

Upload file for **Application Description**

Click **save config**, click **Next Step**, click **Start Test**, scroll down to find & click **Start Test** button, click **Next Step**, click **publish** to publish application to appstore.

3. Login to MECM Portal <https://ip:30093>

3.1. Add k8s node:

Click on **Edge Nodes ->New Rgistration**

VM: k8s

Name: edge1

IP: edge public ip

Location: select from drop down

Address: yanta

Coordinates: 116.39,39.90

Architecture: x86

Capabilities: select none

MEPM: select applcm node from dropdown

The image shows a 'Edge Node Modify' dialog box with a dark theme. At the top, there are three radio buttons for 'VIM' (selected), 'K3S', and 'OpenStack'. Below this, the 'Name' field contains 'edge2'. The 'Ip' field contains '119.13.89.71'. The 'Location' section has three dropdown menus: '陕西省' (Shaanxi Province), '西安市' (Xi'an City), and '雁塔区' (Yanta District). The 'Address' field contains 'yanta'. The 'Coordinates' field contains '116.39,39.90'. Below the coordinates, there is a small text link: 'For coordinate acquisition, please refer to: [OpenStreetMap](#)'. The 'Architecture' section has three radio buttons: 'x86' (selected), 'ARM64', and 'ARM32'. The 'Capabilities' section has two checkboxes: 'GPU' and 'NPU', both of which are unchecked. The 'MEPM' field is a dropdown menu showing '119.13.89.71'. At the bottom, there are 'Cancel' and 'Confirm' buttons.

3.2. Download /root/.kube/config file from edge node

And click on **Upload config file** to upload.
