| Business driver                                     | <p>Differentially private data aggregation framework, pipelineDP, enables write fast, flexible pipelines that use modern techniques to aggregate user data in a privacy-preserving manner.</p> <p>PipelineDP is a framework for applying differentially private aggregations to large datasets using batch processing systems such as Apache Spark, Apache Beam, and more.</p> <p>To make differential privacy accessible to non-experts, PipelineDP:</p> <ul style="list-style-type: none"> <li>Provides a convenient API familiar to Spark or Beam developers.</li> <li>Encapsulates the complexities of differential privacy, such as: <ul style="list-style-type: none"> <li>protecting outliers and rare categories,</li> <li>generating safe noise,</li> <li>privacy budget accounting.</li> </ul> </li> <li>Supports many standard computations, such as count, sum, and average.</li> </ul> |                                                       |
| Business use cases                                  | <ol style="list-style-type: none"> <li>Schools do machine learning on differentially private data aggregation infrastructure for confidential student information.</li> <li>Hospitals do machine learning on differentially private data aggregation infrastructure for confidential patient information.</li> <li>Gov do machine learning on differentially private data aggregation infrastructure for confidential wage information.</li> <li>Telco do machine learning on differentially private data aggregation infrastructure for confidential consumer text msg and phone call records information.</li> </ol>                                                                                                                                                                                                                                                                              |                                                       |
| Business Cost - Initial Build Cost Target Objective | Edge Cloud should be deployable with more than 3 servers in a single rack at a low cost.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                       |
| Business Cost – Target Operational Objective        | <ol style="list-style-type: none"> <li>execute this framework on top of disaggregated datasets in Data Centers and Data Warehouses requires little cost.</li> <li>In-place upgrade of the Data Centers and Data Warehouse should be supported without impacting the availability of the edge applications</li> <li>The automation should also support zero touch provisioning and management tools to keep operational cost lower</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                       |
| Security need                                       | The solution should have granular access control and should support periodic scanning.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                       |
| Regulations                                         | The Edge cloud solution should meet all the industry regulations of data privacy and telco standards (NEBS).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                       |
| Other restrictions                                  | Consider the power restrictions of specific location in the design (example - Customer premise, where data are stored in School's internal servers)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                       |
| Additional details                                  | The Edge Cloud Solution should be deployable across the globe and should be able to support more than 10,000 locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Use case submitters can include SQL queries get /set. |

## 2. If the proposal includes a new Blueprint Family include a completed Blueprint Family template specific to the new Family.

| Case Attributes                  | Description                                                        |

If the proposal is to add a new Family to support an existing Use Case please identify the proposed Use Case.

If the proposal is to add a new Species to an existing Family please identify the proposed Family.

In addition add any other material needed to describe the proposal which is needed for the TSC assessment should be referenced or placed in the proposal's page(s).
