

ELIOT R6 - IoT Gateway Installation Guide

Introduction

The guide covers the installation details which are related to ELIOT IoT Gateway Blueprint.

This guide covers detailed information of the various types of deployments, detailed steps and what are the various components it will install. In addition, the guide provides information on hardware requirements, prerequisite software and minimum hardware requirements. On successful deployment, Center and Edge Nodes will be installed. The number of nodes in Center cluster and Edge node in the cluster is configurable.

The CENTER Node is a K8s Cluster and EDGE Node is a K8s Cluster worker node.

How to use this document

The document includes details of prerequisites /pre-installation, installation and uninstalls steps.

The prerequisites and pre-installation software and hardware should be ready before executing the installation steps.

In BP first release Two types of installation mechanisms are provided, as below

1. Ansible-Playbook single command
2. Command Line Interface (CLI)

Deployment Architecture

The Deployment Architecture consists of the following nodes

- One-Click Deployment Node
- ELIOT Master Node
- IoTGateway Node

Note: For Development environment two nodes is sufficient, where one node plays a dual role of One-Click Deployment Node and Master Node with other as IoTGateway Node.

Figure: ELIOT Deployment Architecture

Note: ELIOT IoTGateway Blueprint Deployment has been tested on Cloud VM and is not tested on Bare-Metal Environment. Though, theoretically deployment should work in bare metal, provided hardware and software prerequisites are met. Kindly refer [ELIOT R6 - IoT Gateway Test Document](#) to get details on the tested deployment.

Pre-Installation Requirements

Hardware Requirements

The number of Hardware requirements depends mainly on the Use Case Scenario and the enterprise scale. A use case can have one Deployment node, ELIOT Master or controller node with one or multiple IoTGateway nodes.

The minimum number of nodes required for a complete ELIOT Topology is 2. (Bare-Metal or Virtual Machines)

- 1) Deployment Node
- 2) ELIOT Master
- 3) ELIOT IoTGateway node

Note: The Hardware details provided are of Virtual Machine configurations.

Minimum Hardware Requirements

ELIOT Master Node	
HW Aspect	Requirements
# of Node(s)	A virtual machine hosted in any Cloud Provider having internet connectivity.
# of CPU	8
Architecture	x86_AMD64 or ARM64.
RAM	8 GB
Disk	120 GB ~ 512GB
Networks	1

IoTGateway Node(s)	
HW Aspect	Requirements
# of Node(s)	1 MEC Host
# of CPU	4
Architecture	x86_AMD64 or ARM64.
RAM	4 GB
Disk	20 GB ~ 256 GB
Network	1

Note: The above specifications are given considering the ELIOT CI / CD environment. User can try lower configuration considering lightweight components being used.

Recommended Hardware Requirements

ELIOT Master Node	
HW Aspect	Requirements
# of Node(s)	A virtual machine hosted in any Cloud Provider having internet connectivity.
# of CPU	8
Architecture	x86_AMD64 or ARM64.
RAM	8 GB
Disk	120 GB ~ 512GB
Networks	1

IOTGateway Node(s)	
HW Aspect	Requirements
# of Node(s)	1 MEC Host
# of CPU	4
Architecture	x86_AMD64 or ARM64.
RAM	4 GB
Disk	20 GB ~ 256 GB
Network	1

Software Prerequisites

- Virtual Machines preinstalled with Ubuntu 18.04 for MECM Node.
- Virtual Machines preinstalled with Ubuntu 18.04 for MEC Host Nodes
- root user created in the Deployment Node, MEC Node and MEC Host Node.
- SSH Server running in all the Nodes.
- Ansible > 2.10.7 installed in One Click Deployment Node (Jump Host)
- git installed in Jump Host.

Database Prerequisites

Schema scripts

N/A

Other Installation Requirements

Jump Host Requirements

Network Requirements

- Internet connectivity in OCD Host, ELIOT Master and IOTGateway Nodes.
- The ELIOT Master Node and EDGE/IotGateway Node should be able to ping each other.

Bare Metal Node Requirements

N/A

Execution Requirements (Bare Metal Only)

N/A

Installation High-Level Overview

The blueprint provides one click deployment and command-line interface for installing the ELIOT blueprint components.

Bare Metal Deployment Guide

Install Bare Metal Jump Host

Note: ELIOT Blueprint Deployment has been tested on Huawei Cloud Virtual Machines and is not tested on Bare-Metal Environment.

Though theoretically deployment should run successfully in bare metal too provided hardware and software prerequisites are met.

Creating a Node Inventory File

N/A

Creating the Settings Files

N/A

Running

N/A

Virtual Deployment Guide

For Virtual Deployment minimum 2 Virtual machines, following are the virtual machines(OCD and Master on same node) and their usage

No	Usage
1	One Click Deployment Node
2	ELIOT Master Node
3	IoTGateway Node

All the nodes should have internet connectivity , network interface and network connectivity between the VM's.

In this release to install the ELIOT environment.

i) ELIOT Deployment using Ansible-Playbook single command

Standard Deployment Overview

Jump Host Software Installations:

Login to the Jump Host and perform the below steps:

1. Install Ansible > 2.10.7
2. Install git
3. Install python3 and pip3

Jump Host Pre-Configurations for MECM Components Installation

Login to the Jump Host and perform the below configuration steps (Steps : as below-

1. Generate public key :

- `ssh-keygen -t rsa`

2. Setup password-less login -

- If you get authentication issue you can change the permission

Open file: `vi /etc/ssh/sshd_config`

- `PermitRootLogin yes`

- `PasswordAuthentication yes`

Restart ssh service:

- `sudo systemctl restart ssh.service`

For EdgeGallery AIO mode:

Login from ocd to center and ocd to edge in a single node.

- `sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<node_ip>`

For EdgeGallery Muno mode:

Login from ocd to center in a controller node

- `sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<controller-node_ip>`
- `sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<edge-node_ip>`

Login from ocd to edge in a edge node

- `sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<controller-node_ip>`
- `sshpass -p <password> ssh-copy-id -p <ssh-port> -o StrictHostKeyChecking=no root@<edge-node_ip>`

3. These command are require in both AIO and MUNO(Contrroller and Edge Node) mode.

```
cp -p /etc/passwd /etc/passwd.bkp
```

```
cp -p /etc/group /etc/group.bkp
```

```
id ubuntu
```

```
groupmod -g 600 ubuntu
```

```
id ubuntu
```

4. Review and Change Parameters

For EdgeGallery AIO Mode:

eliot/blueprints/iotgateway/playbooks/hosts-aio

- Here user can use the private IP of a node

```
root1@root1-ThinkPad-T440p: ~/Downloads/EG1.5/EdgeGallery-v1.5.0-all-x86/install
#
# Copyright 2021 Huawei Technologies Co., Ltd.
#
# Licensed under the Apache License, Version 2.0 (the "License");

# limitations under the License.
#
[master]
master-ip

"hosts-aio" 17 lines, 635 characters
```

eliot/blueprints/iotgateway/playbooks/var.yml

- **NETWORK_INTERFACE:** regex for network interface on the VM. (user can be check in interface name by ifconfig and provide interface name accordingly for example like eth.*)
- **MASTER_IP:** Here user can use the private IP of a node
- **PORTAL_IP:** If portal need to be access over internet then uncomment the **PORTAL_IP** and use public IP as a **PORTAL_IP** otherwise portal will be accessible only on private IP default.

```
root1@root1-ThinkPad-T440p: ~/Downloads/EG1.5/EdgeGallery-v1.5.0-all-x86/install
# you may not use this file except in compliance with the License.

# See the License for the specific language governing permissions and
# limitations under the License.
#
# Set the regex name of the network interface for calico
NETWORK_INTERFACE: eth.*
#
# Could be true or false
# true: Deploy K8s NFS Server to keep the persistence of all pods' data
# false: No need to keep the persistence of all pods' data
ENABLE_PERSISTENCE: true
#
# One IP of the cluster master node
MASTER_IP: xxx.xxx.xxx.xxx
#
# ip for portals, will be set to private IP of master node default or reset it to be the public IP of master node here
# PORTAL_IP: xxx.xxx.xxx.xxx
#
# IP of the Controller master which is used for Edge to connect
# If you deploy Controller and Edge together in one cluster, then there is no need to set this param
# CONTROLLER_MASTER_IP: xxx.xxx.xxx.xxx
#
# NIC name of master node
# If master node is with single NIC, not need to set it here and will get the default NIC name during the run time
# If master node is with multiple NICs, should set it here to be 2 different NICs
# EG_NODE_EDGE_MPS: eth0
# EG_NODE_EDGE_MMS: eth0
#
# Email Server Config for User Mgmt
usermgmt_mail_enabled: false
# If usermgmt_mail_enabled is true, then the following 4 params need to be set
# usermgmt_mail_host: xxxxx
# usermgmt_mail_port: xxxxx
# usermgmt_mail_sender: xxxxx
# usermgmt_mail_authcode: xxxxx
```

eliot/blueprints/iotgateway/playbooks/password-var.yml

- All passwords must include capital letters, lowercase letters, numbers and special characters and whose length must be no less than 8 characters. Also there should be no special characters & in it. Otherwise, the deployment will failed because of these simple passwords.
- A sample password could be "Harbor@12345"

MUNO-Mode:

Execute the below command:

```
cd eliot/blueprints/iotgateway/playbooks
```

```
ansible-playbook -i muno-config/controller/hosts-muno-controller eliot-eg-muno-controller.yml --extra-vars "operation=install" -e "ansible_user=root"
```

```
ansible-playbook -i muno-config/edge/hosts-muno-edge eliot-eg-muno-edge.yml --extra-vars "operation=install" -e "ansible_user=root"
```

For AIO mode:

Execute the below command

```
cd ealt-edge/ocd/infra/playbooks
```

```
ansible-playbook eliot-eg-aio-latest.yml -i hosts-aio --extra-vars "operation=install" -e "ansible_user=root"
```

FOR ELIOT Stack:

Execute the below command

Setup environment -

```
ansible-playbook eliot-all.yml -i eliot-inventory.ini --extra-vars "operation=install"
```

Once the execution is completed in console will see prompt "ELIOTEdge Environment Installed , Components Install ELIOT Master and EDGE Nodes Successfully"

Verifying the Setup

Verifying ELIOT IotGateway Deployment

Currently the verification is manually done.

1. Login to the Master Node and check whether K8S cluster is installed.
2. Check the below mentioned components and services are running as Pods / Services in Kubernetes cluster
 - a. Edge Gallery
 - b. grafana
 - c. rabbitmq
 - d. cadvisor
 - e. edgex
 - f. Hawkbit
 - g. opc-ua
3. Login to Edge Host and verify the worker node setup

For muno mode

Deploy Application in ELIOT

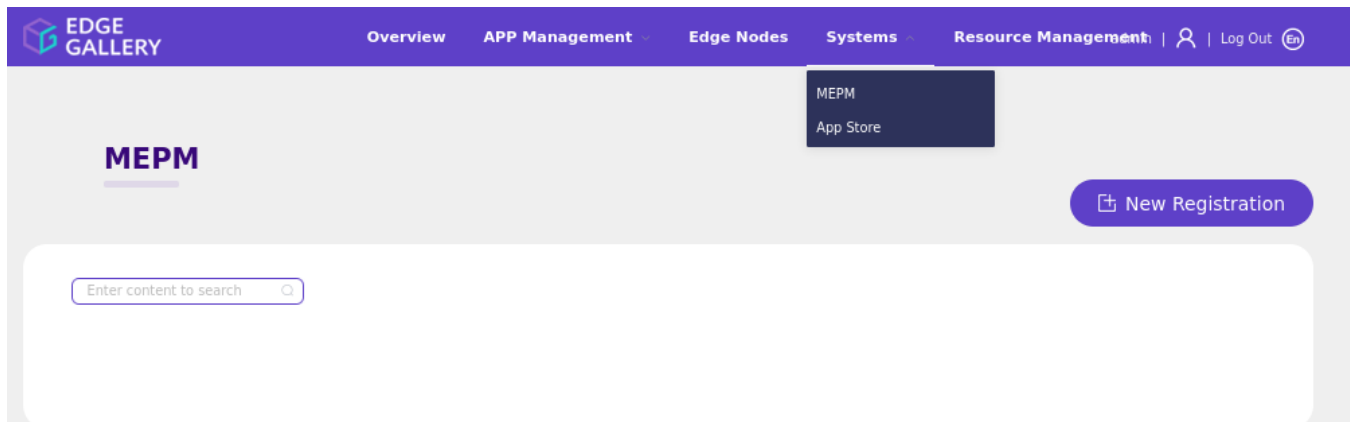

1. Login to MECM Portal <https://ip:30093>

1.1 click on **Systems ->App LCM ->New Registration**

Name: Applcm(any general name)

IP: applcm"public ip"

Port: 30204

The screenshot shows a modal window titled 'App LCM Registration'. The modal has a blue header bar with a close button (X). The form contains three required fields, each marked with a red asterisk: 'Name', 'Ip', and 'Port'. The 'Port' field is pre-filled with the value '30204'. At the bottom of the modal are two buttons: 'Cancel' and 'Confirm'.

1.2. click on **Systems ->App Store ->New Registration**

App Store Name: appstore(any general name)

IP: Appstore public ip

Port: 30099

Appstore Repo: {HarborIP:443}{192.168.1.1:443}

Repo Name: appstore(any general name)

Repo Username: admin(harbor user name)

Repo Password: Harbor12345(harbor password)

Vendor: vendor(any general name)

App Store Registration

* App Store Name

* IP

* Port

* Appstore Repo

* Repo Name

* Repo Username

* Repo Password

Cancel

Confirm

2. Login to Developer Portal <https://ip:30092>

2.1. Add sandbox env to deploy application before publish

Click System ->Host Management ->Add Host

The screenshot shows a 'Modify' form for a node configuration in the EdgeGallery Developer. The form includes the following fields and values:

- Name:** Test-Test
- System:** ☒ k8s ☐ OpenStack
- IP:** 110.13.89.71
- mechHost:** 110.13.89.71
- Port:** 31252
- Protocol:** https
- Architecture:** x86
- Status:** Normal
- Port Range:** 00000 to 32000
- Address:** Bangalore
- Other:** DC_ID=FS_MManager_VPC;az_demonova;map_certificate=YHKOFTWU1@B%qB%5&C01C122479*3
- UploadConfig File:** (button)

The browser's address bar shows 'EdgeGallery Developer - Google Chrome'.

Name: general name

System: k8s

Lcmip: sandbox ip(for testing purpose can provide edge ip, if no sandbox env)

mechHost: sandbox ip(for testing purpose can provide edge ip, if no sandbox env)

Port: 31252

Protocol: https

Architecture: X86

Status: Normal

Port Range: leave as it is

Address: Bangalore

UploadConfig File: upload sandboxenvkubecfg file

3. Login to MECM Portal <https://ip:30093>

3.1. Add k8s node:

Click on **Edge Nodes** -> **New Registration**

VM: k8s

Name: edge1

IP: edge public ip

Location: select from drop down

Address: yanta

Coordinates: 116.39,39.90

Architecture: x86

Capabilities: select none

MEPM: select applcm node from dropdown
