SEBA Containers

The SEBA blueprint will include multiple containers required to deploy the CORD Platform, SEBA Profile, ATT Workflow, and other supporting services identified during the blueprint development. For those new to CORD, an overview and description of CORD components and can be found on the opencord.org wiki here: https://guide.opencord.org/navigate.html

The CORD components are in active development and change frequently. The best way to get a current list of containers and versions is to complete an installation following the install guide (https://guide.opencord.org/) or the alternate offline install steps (https://guide.opencord.org/offline-install.html).

You could start looking here to get a list of containers: https://guide.opencord.org/offline-install.html#identify-download-tag-and-push-images
